# MOTION OF THE ELLIPOIDAL SHAPE HEAVY BODY ON THE HELICOID SURFACE IN THE NONHOLONOMIC LINK CONDITIONS

The system of the differential equations presenting a rolling of an ellipsoid on a helicoid surface in the gravity field is obtained. The problem is solved for nonholonomic link of single-point contact of ideally rough surfaces. In the capacity of generalised coordinates the angular magnitudes presenting a rule of a point of contact, and Euler's defining a rule of an ellipsoid on a helical surface the angles are accepted. Are justified initial and boundary conditions.

**Keywords:** ellipsoid, helicoid, nonholonomic link, generalised coordinates, Euler's angles, Appel's equations.
